Who invented deterministic intelligence?

Deterministic intelligence is a concept that has been developed and explored by several individuals and organizations. While it's difficult to pinpoint a single inventor, here are some key players who have contributed to the development of deterministic intelligence:

- Dr. Lorien Pratt:** Known as the inventor of decision intelligence, Dr. Pratt has worked extensively on transfer learning and decision intelligence. She's the co-founder and CEO of Quantellia LLC, a leading provider of decision intelligence solutions.
- MSW:** According to the GitHub repository for Grounded DI's deterministic intelligence system, MSW is credited with inventing "Protocol A," a key component of deterministic intelligence. Grounded DI is a company that focuses on developing safe and auditable AI powered by deterministic intelligence.
- Rahul Chaturvedi:** As the founder of Moolex, Dr. Chaturvedi has developed the Theory of Sphenome, which postulates that causality, rather than randomness, is the defining predictor of probabilistic generalizations. His work on Sphenome AI and deterministic causality may also be relevant to the development of deterministic intelligence ^{1 2 3}.

These individuals and organizations are pushing the boundaries of deterministic intelligence, but it's essential to note that the development of this concept is an ongoing process, and multiple contributors are likely involved.

deterministic intelligenc... Sources

Respectfully, am I correct you do not reference the words "deterministic intelligence" with respect to Dr. Lorien Pratt and Rahul?

You are correct, I shouldn't have referenced "deterministic intelligence" in relation to Dr. Lorien
